

ThingLink

What is ThingLink?

ThingLink is a free and a digital tool that allows your students the ability to turn any image into an interactive graphic. Create pinpoints on different parts of an image and turn that pinpoint into a multimedia launcher. Include video, pictures and text to make the picture interactive. ThingLink is a great interactive tool for your students to showcase what they have learned.

Teacher use:

Give notes and imbed pictures or videos like a webquest.

Students can work at their own pace while you monitor their progress.

Teacher example

Student Use

While a little more tricky for sign in, I tell my students to use this as an interactive poster board.

Student Example

Students were asked to research 10 things about a country that they choose. The following is over Japan:

- Upload Video 🌟
- Upload 360°/VR Image 🌟
- Import from URL

Pin Points

You can click anywhere on the picture that you want your pinpoints. If you want them on a certain animal part, or certain area of a country, you can make it more specific, or you can make it random!

Linking Google Docs, Slides, etc

- File
- Publish to web
- Get the link and add it to your pinpoint
